Precision

Safe braking requires pinpoint accuracy. We build our products according to the manufacturers' specifications. Etrifix repair kits are the spare parts your braking system needs.

Safety

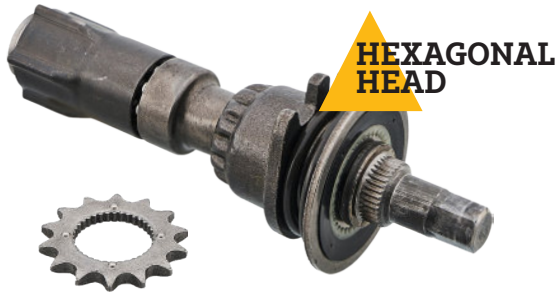

We control and individually test each spare part. Now you can press the brake pedal with the same confidence you had on the first day!

Quality

Our products have perfect quality. We carefully select the raw materials, we apply the right treatments and we use the latest CNC machineries available in our production.

Reliability

We guarantee that our repair kits will have an improved lifespan. By choosing any of the Etrifix products, you will get fair prices and optimal maintenance expenses.

The benefits of Etrifix products

Quality

Quality materials only come from production processes carefully controlled by specialists in the field. We control the quality of a piece throughout the production flow, not only in the final stage. We take care that every treatment and finishing of our parts is of the best quality and we have ensured that the parameters of the raw material will always meet the specifications of OE (Original Equipment).

Precision

Safe braking requires the highest accuracy. We respect the specifications of OE manufacturers with the highest precision. The spare parts produced by Etrifix are the ones your braking system needs. Now you can press the brake pedal with the same confidence as on the first day!

Excellence

The main rule that we consider when producing an Etrifix spare part is to always respect both the dimensional characteristics and those related to the raw materials used.

Safety

Our specialists carefully test and check all components before they reach the market! We control and test each mechanism individually. Your safety is our highest priority.

Profitability

The braking system should contain only quality spare parts not just spare parts with good price. Etrifix products will help you reduce the maintenance costs of your braking system in the long run. Therefore, the use of quality parts also leads to a reduction in repair costs and a decrease in the costs generated by keeping your trucks in the auto service instead of on the roads.

Professionalism

Professionalism is the flagship attribute of all Etrifix employees and suppliers! Our Etrifix sales team is ready to provide expert counseling and personalized advice. Together, we will choose the best option for your safety and your loved ones - always with seriousness and promptness.

Reliability

By choosing Etrifix, you have the guarantee that your spare parts will have an optimal lifespan. This quality is found in all our portfolio products and allows you to fully trust the braking system of your car.

Certification

All Etrifix components are made with the help of state-of-the-art technologies, LIEBHERR-LORENZ brand, certified by Wacker Chemie. In addition, the silicone we have chosen to use in making Etrifix components is REACH and ROHS certified. What does this certification mean? We have assumed that we will produce Etrifix parts using only quality raw materials.
